

Interlayer Laminate Film for PVB

Madico interlayer laminate film is designed to improve ballistic and security glass products. This product offers an excellent solution for reducing weight, adding strength and increasing the safety of glazing. This interlayer laminate film has an adhesion-promoting primer on both sides to ensure bonding to PVB interlayers after an autoclave process.

Material Construction - CL 700 PVB (I):

Total laminate thickness7 mil
All thicknesses are based on nominal data.

Available in 150 cm / 60" width.

Benefits:

- Weight Reduction
- Chemically Resistant
- Offers improved ballistic performance
- Cost reduction opportunities
- Benefits of laminated glass
- Excellent optical performance

Applications:

Automotive:

- Sunroofs
- Windshields
- Side and rear lites

Defense/Security:

- Bullet-resistant glazing
- Forced entry-resistant glazing
- Detention facility glazing
- Blast-resistant glazing

Transportation:

- Rail car windscreens
- Mass transit vehicles
- Marine vessels

Architectural Glazing:

- Skylights
- Curtain walls
- Security doors

VLT & Haze, Film Only (as received)

Transmitted: >89%
Haze: <1.2%

Mechanical Properties (typical values)

MD Break: 25,000 psi
MD Elongation: 183%
MD Shrinkage (190°C, 5 minutes): 2.3%
TD Break: 32,000 psi
TD Elongation: 94%
TD Shrinkage (190°C, 5 minutes): 2.2%

Adhesion to interlayer, weathering, and impact testing should be done by customers using their specified materials, processes and test methods to validate this product for the intended application.
